Introduction

The Vodigi Administrator is a web-based solution and must be installed on a web server. It is recommended that the web server use Windows Server 2008 or Windows Server 2012 as the operating system. Internet Information Services (IIS), which is included with Windows Server 2008 and Windows Server 2012, is recommended as the web server software to use with Vodigi.

This guide is intended to be used to assist in the installation of Internet Information Services in Windows Server 2008.

Prerequisites

It is recommended that the web server use Windows Server 2008 or Windows Server 2012 as the operating system. Installation instructions in this document assume Windows Server 2008 is the operating system.

Installation

When Windows Server 2008 is installed, most services are not installed or enabled by default. This is for security reasons, as no service should be running unless it going to be used.

Follow these steps to install and enable IIS on Windows Server 2008.

- Open Server Manager.
- Select Roles in the Server Manager tree.
- Click Add Roles on the right side of the screen.

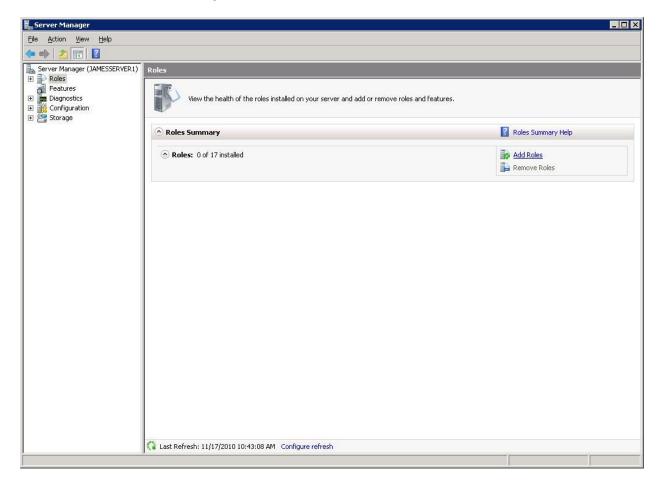

Figure 1 - Step 1

Click Next.

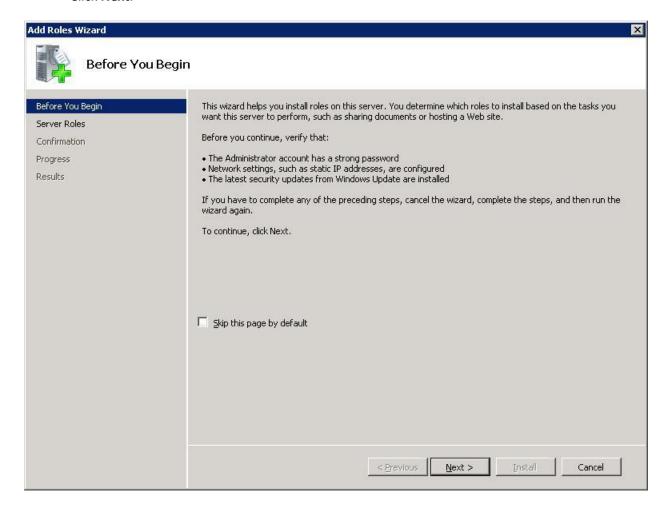

Figure 2 - Step 2

- Select the Web Server (IIS) role.
- Click Next.

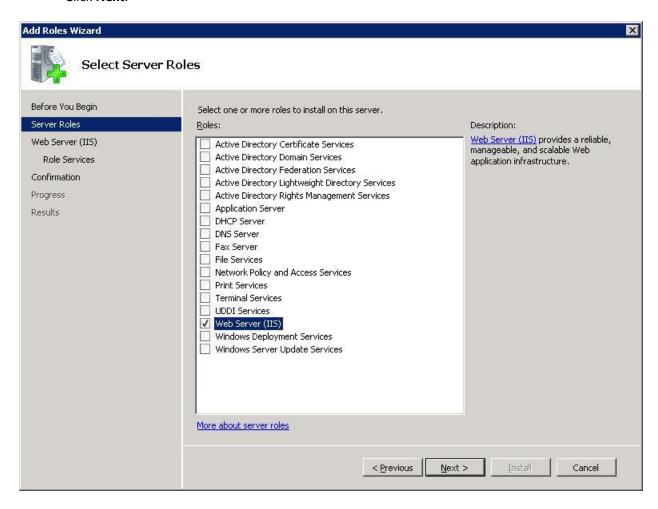

Figure 3 - Step 3

 You will likely be prompted on several occasions to install additional features. Click Add Required Features when prompted to continue.

Figure 4 - Step 4

- Review the information.
- Click Next.

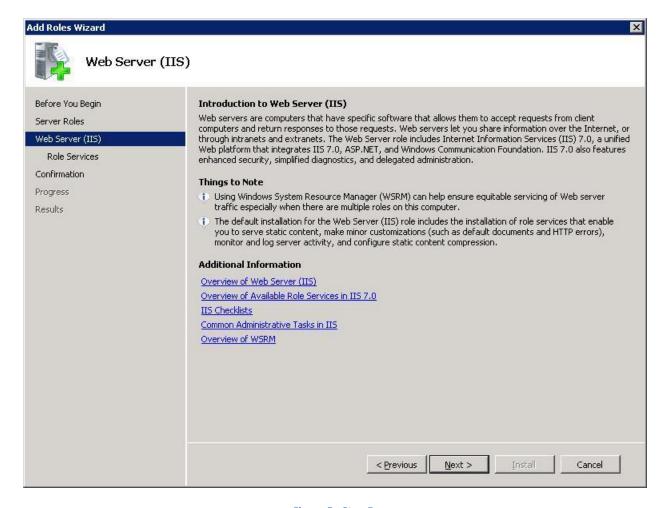

Figure 5 - Step 5

• Select all options under **Common HTTP** features.

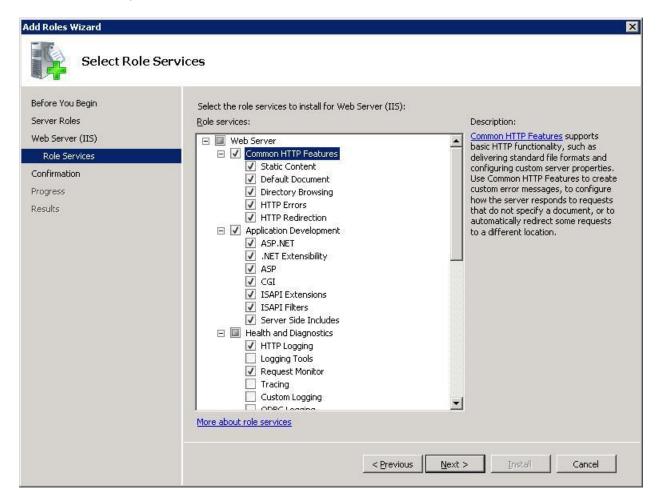

Figure 6 - Step 6

• Select all options under **Application Development**.

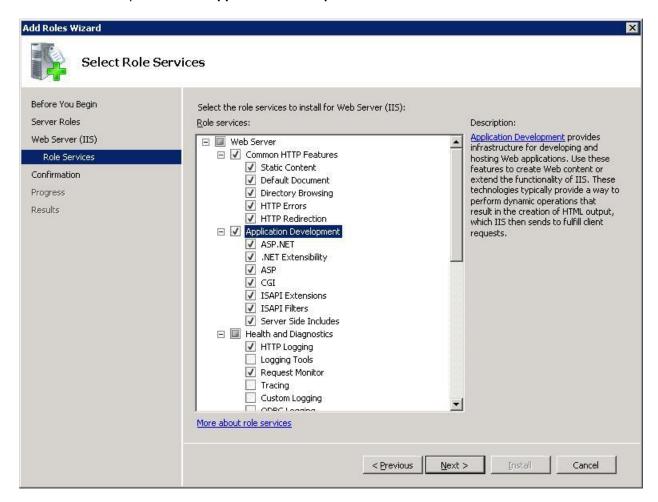

Figure 7 - Step 7

Check HTTP Logging and Request Monitor under Health and Diagnostics.

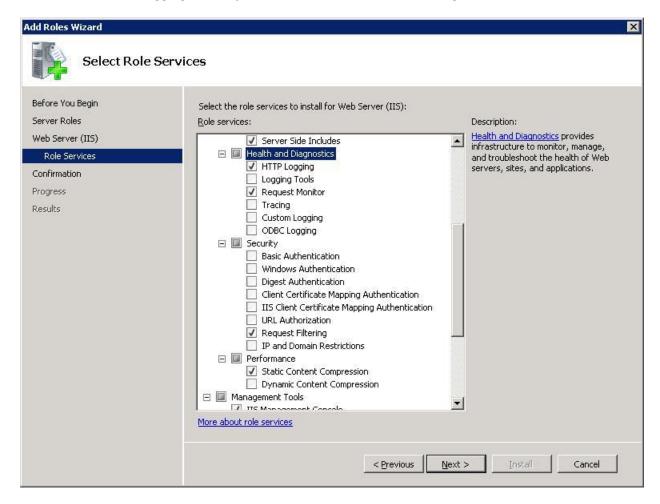

Figure 8 - Step 8

- Leave all other settings at their default settings.
- Click Next.

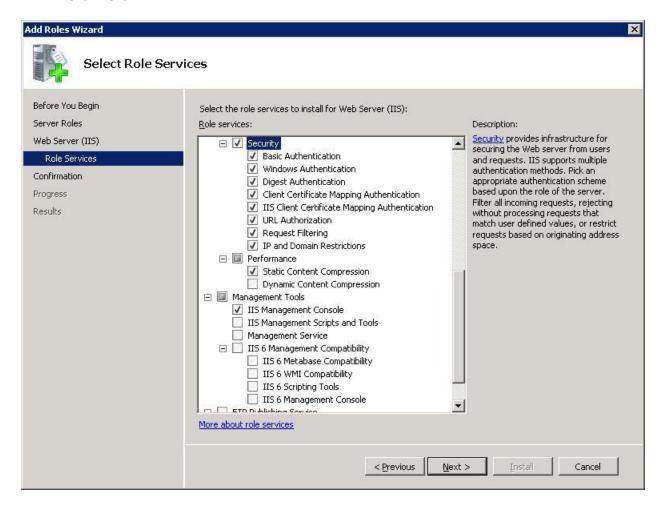

Figure 9 - Step 9

• Click Install.

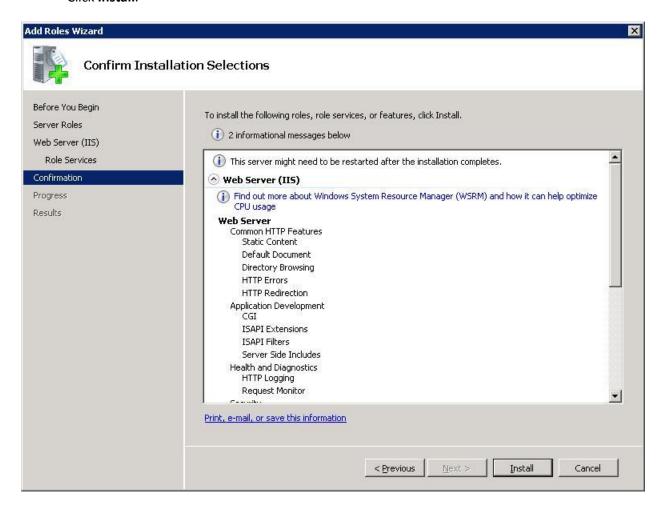

Figure 10 - Step 10

• Click **Close** once installation has completed.
